KOGI

Independent Worker Operating System

HIGH-FIDELITY SCREEN FLOWS

UX Design Specification Document

Confidential · Version 1.0 · 2025

15 screen flows · 8 platform modules · Complete user journey documentation

Auth · Portfolio · WBS · Marketplace · Exchange · AI Agent · Governance · Studio

Prepared by the Kogi Product & Design Team

DOCUMENT OVERVIEW

Platform screen flow reference

About This Document

This document captures high-fidelity screen mockups for the Kogi Independent Worker Operating System. Each screen includes the full UI rendering, a description of the screen's purpose, key UI elements, and flow annotations showing how users navigate between states.

Screen Flow Groups

- **Auth & Onboarding:** Login, registration, MFA, onboarding wizard
- **Dashboard:** Unified home view with portfolio health, AI suggestions, activity feed
- **Portfolio:** Hierarchical portfolio management — programs, projects, resources
- **Work Board (WBS):** Kanban board, sprint management, story detail, blockers
- **Marketplace:** Browse listings, listing detail, order flow, my listings
- **Exchange:** Wallet, transactions, invoices, escrow management
- **AI Agent:** Contextual chat, tool calls, suggested actions, history
- **Governance:** AO overview, proposals, voting, member management, treasury
- **Idea Studio:** Pipeline view, idea detail, validation, capture, IP timestamp
- **Analytics:** Revenue overview, OKR progress, marketplace performance
- **Profile & Settings:** Profile, availability, skill showcase, notification settings, billing

Design System

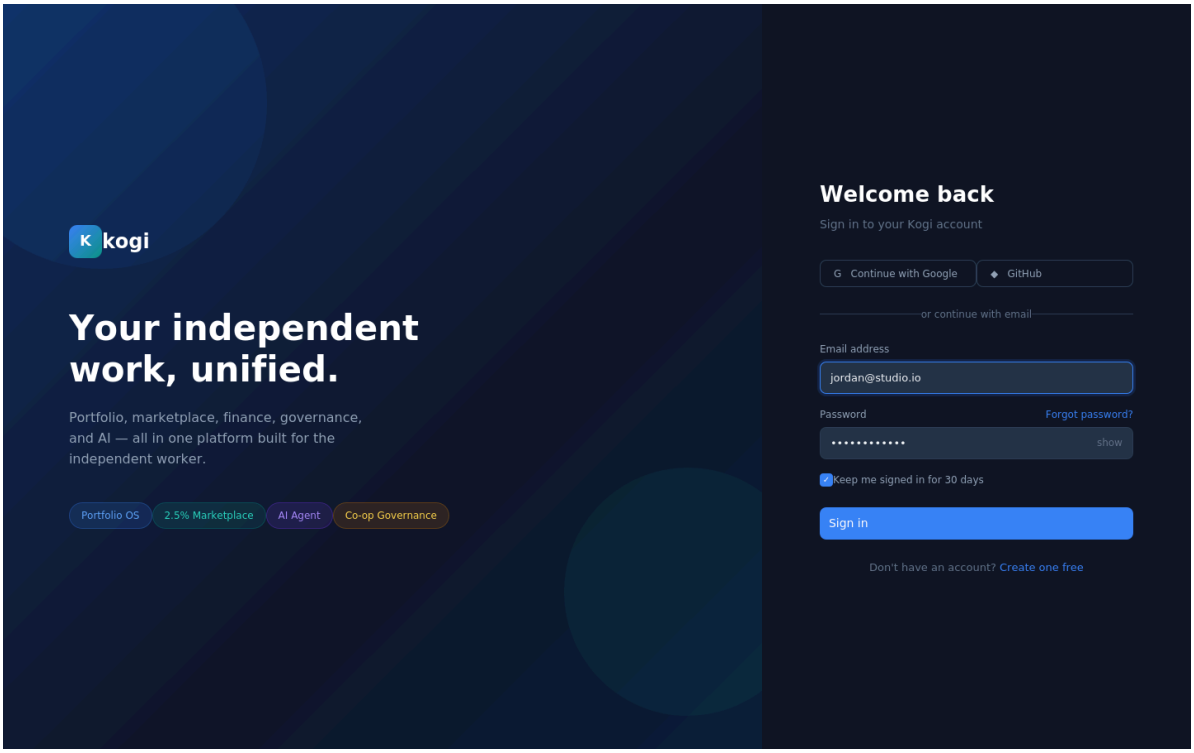
- Color Palette: Navy (#0F2D5E) primary, Sky (#3B82F6) interactive, Teal (#0D9488) secondary, dark background (#0F172A)
- Typography: DejaVu Sans / Arial, size scale 10–28px, 5 weight levels
- Component Library: Cards, badges, tables, buttons, kanban cards, stat cards, progress bars
- Layout: 1440×900px viewport, 220px fixed sidebar, 56px topbar, 24px content padding
- Dark Mode: The platform defaults to a professional dark mode optimized for long work sessions

AUTH & ONBOARDING

4 screens

01_login Login · Auth & Onboarding

Primary sign-in screen supporting email/password and OAuth (Google, GitHub). Includes "Keep me signed in" toggle for 30-day session retention.



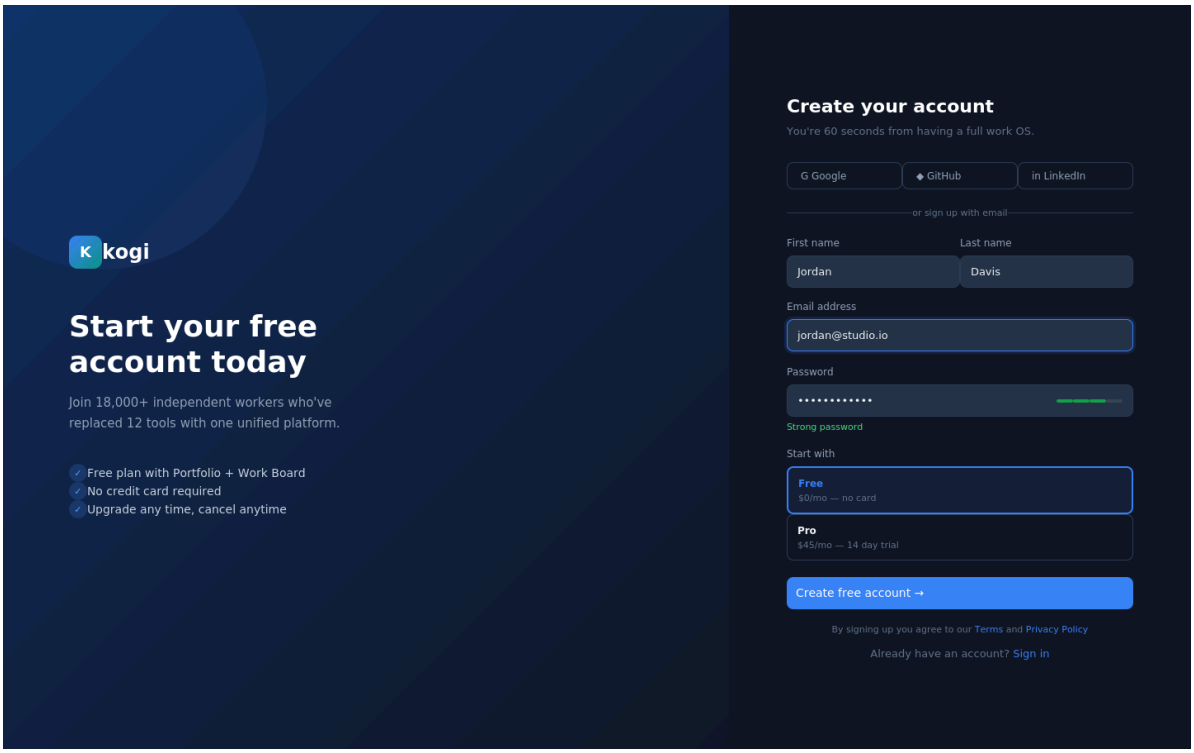
Key Elements

- **Left panel:** Brand value proposition with feature pills — shown to unauthenticated visitors as marketing surface
- **OAuth buttons:** Google and GitHub OAuth — fastest path to signup for technical users
- **Email input:** Auto-detects existing account vs new user; redirects to registration if email not found
- **Remember me:** Sets 30-day session cookie via secure httpOnly with CSRF protection

User Flow: User enters email → enters password → optionally enables MFA → lands on Dashboard. Failed login shows inline error; password reset triggers email flow.

02_register Registration · Auth & Onboarding

New account creation with OAuth shortcuts, email/password form, and plan selection. Includes real-time password strength indicator.



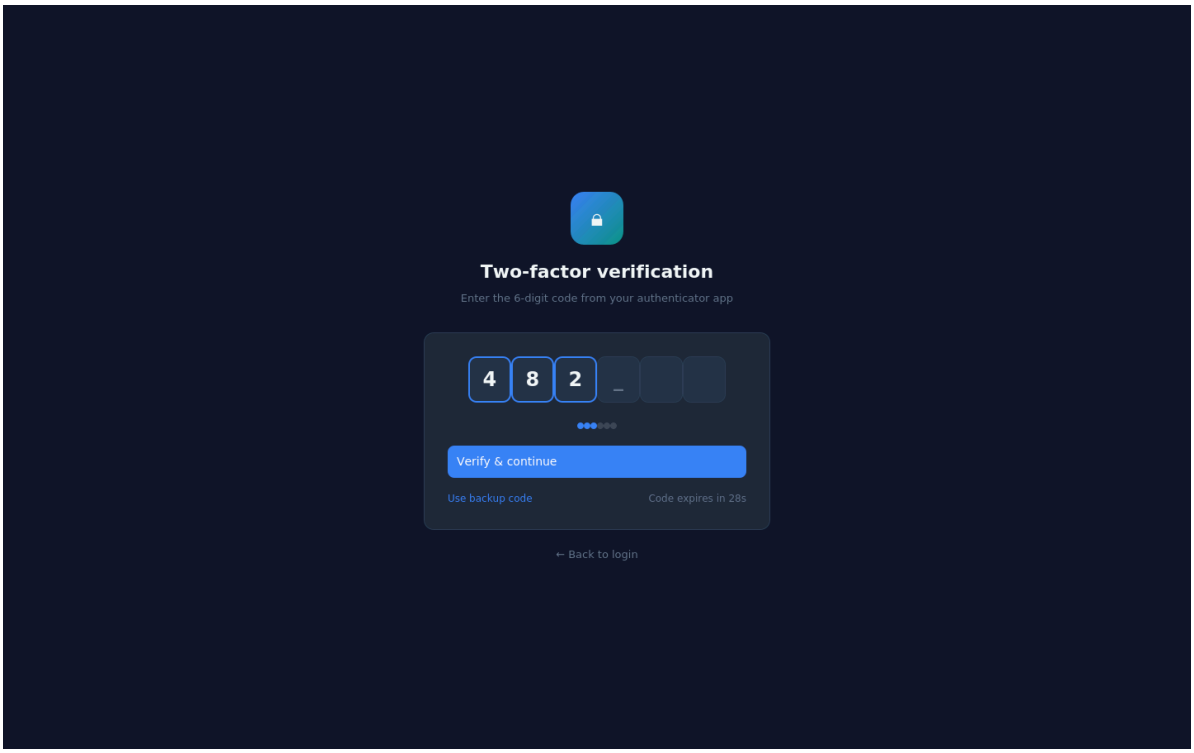
Key Elements

- **Plan selector:** Free (no card) vs Pro (14-day trial) displayed at signup to capture high-intent users early
- **Password strength:** Real-time Argon2id strength estimation with 4-level visual indicator
- **Social proof:** "18,000+ independent workers" counter reinforces trust at conversion moment

User Flow: User chooses OAuth or email → fills name/email/password → selects Free or Pro plan → submits → receives verification email → lands on onboarding wizard.

03_mfa MFA Verification · Auth & Onboarding

TOTP-based multi-factor authentication step. Required for wallet and financial operations regardless of session state.



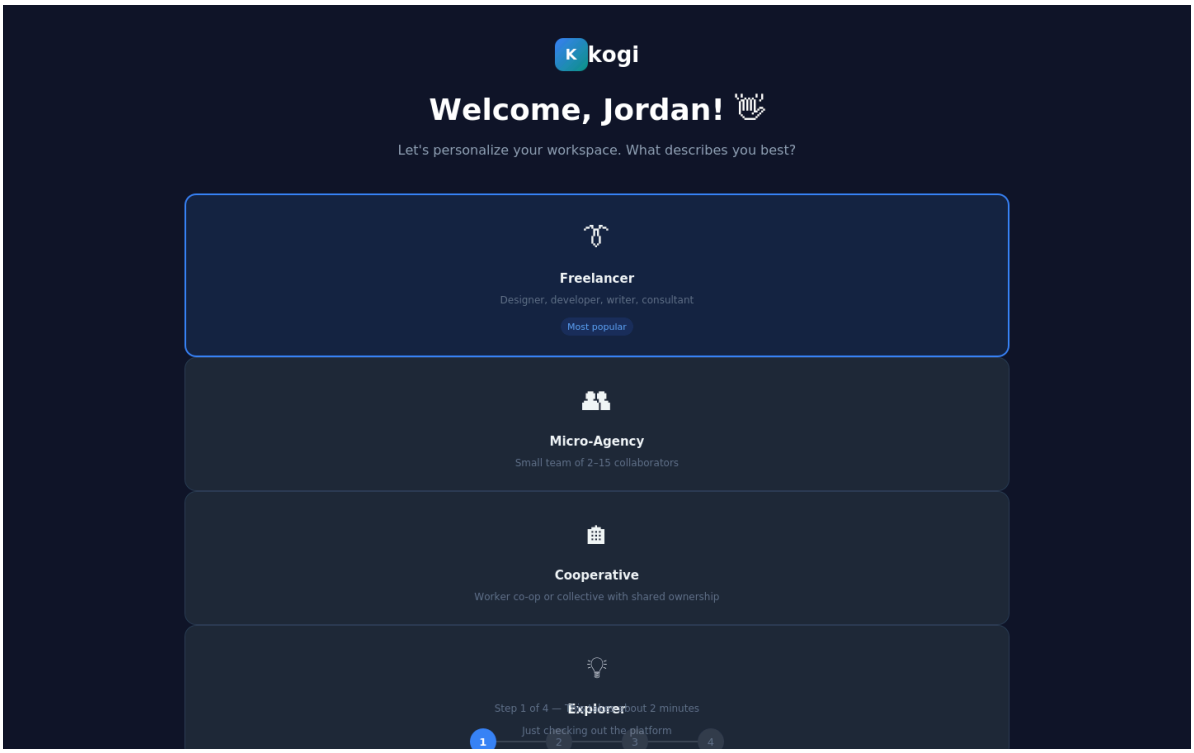
Key Elements

- **6-digit input:** Individual digit inputs with auto-advance; accepts paste from authenticator app
- **Expiry timer:** 28-second countdown; code refreshes automatically on expiry without page reload
- **Progress dots:** Visual entry progress — fills as digits entered to confirm input is registering

User Flow: After password auth → TOTP code entry (6 digits, 30s window) → verified → Dashboard. Backup code path available for lost authenticator.

04_onboarding_welcome Onboarding — Welcome · Auth & Onboarding

First screen of the 4-step onboarding wizard. User selects their persona to personalize module visibility and initial workspace setup.



Key Elements

- **Persona cards:** Freelancer, Micro-Agency, Cooperative, Explorer — drives module defaults and onboarding content
- **Progress indicator:** 4-step stepper shows completion progress; users can jump back to earlier steps
- **Time estimate:** "Takes about 2 minutes" sets expectations and reduces abandonment anxiety

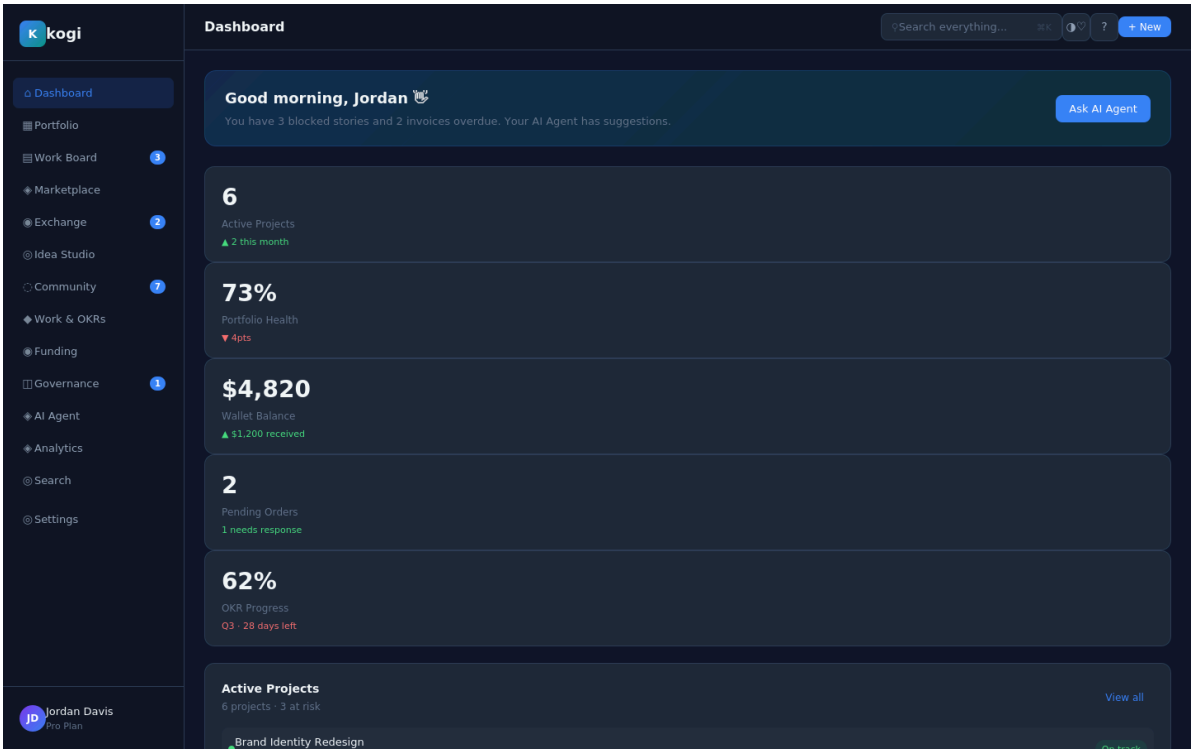
User Flow: Step 1: Persona selection → Step 2: Primary module activation → Step 3: Create first project → Step 4: Invite collaborators (optional) → Dashboard.

DASHBOARD

1 screen

05_dashboard Dashboard · Dashboard

The unified home view shown after login. Displays portfolio health, stat cards, active projects, activity feed, AI suggestions, and OKR snapshot.



Key Elements

- **AI welcome banner:** Proactive AI Agent surface — shows top 1 contextual action based on portfolio state
- **Stat cards:** 6 key metrics: projects, portfolio health, wallet balance, pending orders, OKR progress
- **Project health indicators:** Color-coded dots (green/amber/red) with At risk / On track / Off track badges
- **Activity feed:** Real-time event stream: AI actions, payments received, order completions, reviews
- **AI Agent panel:** Inline AI suggestions with one-click action buttons — avoids requiring full chat session
- **OKR snapshot:** 3 active OKRs with progress bars — clickable to drill into full OKR view

User Flow: Entry point after auth. AI banner → stat cards → project list → activity → AI panel → OKR cards. Quick actions: Ask AI, create item, view project.

PORTFOLIO

1 screen

06_portfolio Portfolio Overview · Portfolio

Grid view of all portfolio items — Programs, Sub-Portfolios, Projects, and Resources. Each card shows health score, financials, and story counts.

Key Elements

- **Color accent bars:** Gradient bars at card top represent the program's primary theme — customizable
- **Health score:** Portfolio health 0–100 computed from story completion rate, blocked count, and OKR progress
- **Financial summary:** Monthly revenue or resource value shown per item — links to Exchange transaction history
- **Resources card:** Aggregated view of assets, capital, licenses, and equipment across all items
- **Add card (dashed):** Always-visible creation affordance — opens type selector (Program, Project, Sub-Portfolio, Resource)

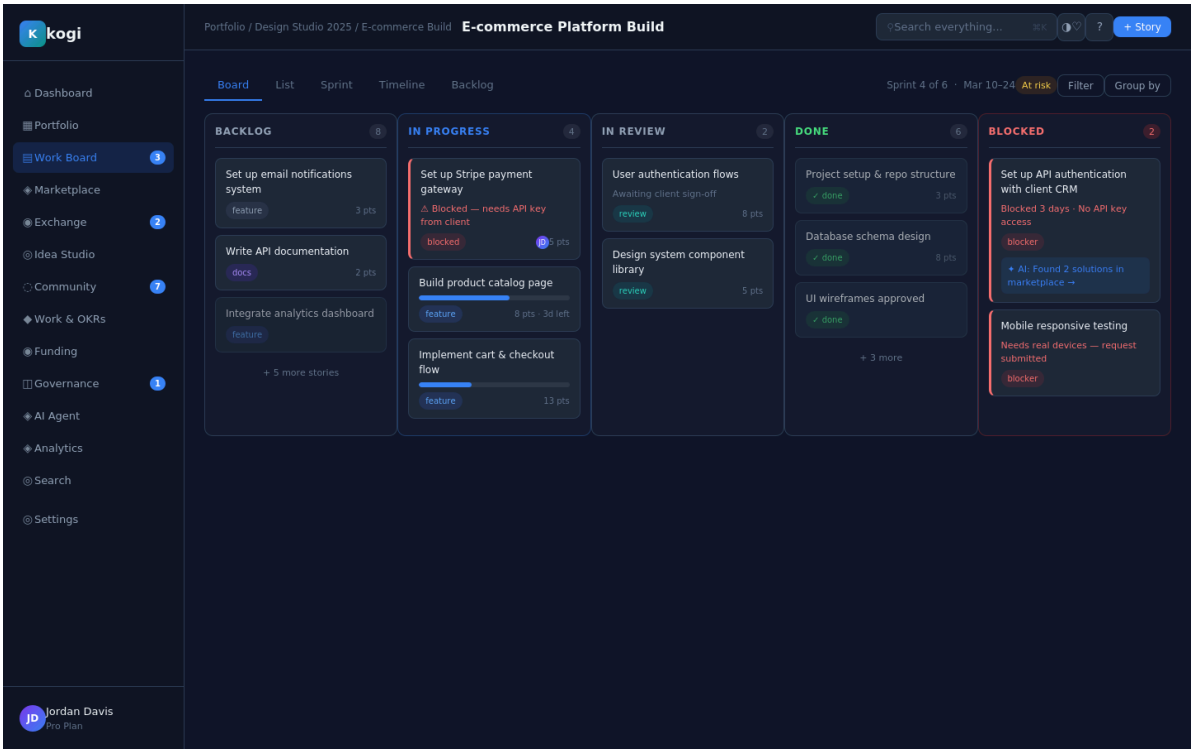
User Flow: Click card → Portfolio Item detail view. Click + → Create item modal. Toggle views: Grid / List / Map. Filter by type, status, or health.

WORK BOARD (WBS)

1 screen

07_wbs_board Work Board — Kanban · Work Board (WBS)

Sprint kanban board for a single project. Columns: Backlog, In Progress, In Review, Done, Blocked. Story cards show type, assignee, points, and AI suggestions.



Key Elements

- **Sprint indicator:** Sprint number, date range, and risk badge in topbar — links to sprint planning view
- **Blocked column:** Dedicated Blocked column (not just a status) — prevents clutter in In Progress; AI auto-surfaces resolutions
- **AI suggestion pill:** Inline AI action on blocked stories — "Found 2 solutions in marketplace →" — one click resolves
- **Story type badges:** 30+ story types (feature, bug, blocker, review, docs, etc.) color-coded for visual scanning
- **Progress bars:** Inline mini progress bars on In Progress cards show sub-task completion percentage

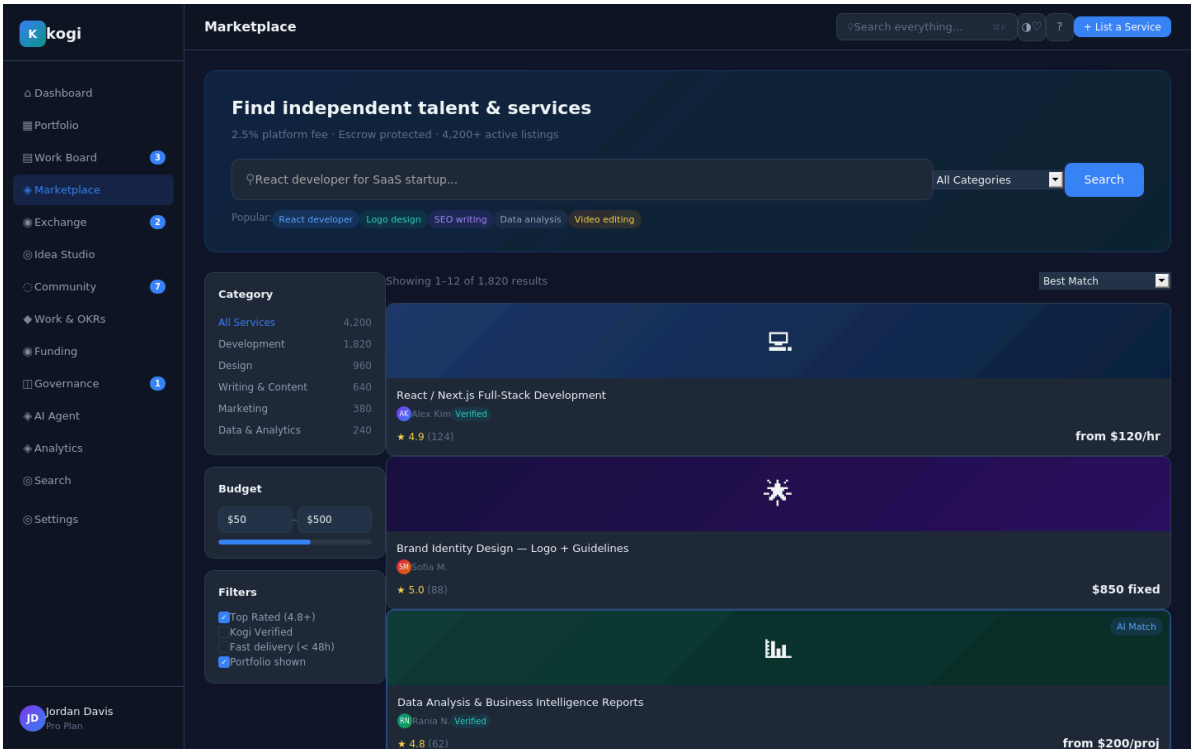
User Flow: Story card drag-drop between columns updates status. Click card → Story detail. + Story → create inline or in modal. AI badge on blocked stories opens resolution suggestions.

MARKETPLACE

1 screen

08_marketplace_browse Marketplace — Browse · Marketplace

Searchable marketplace with category sidebar, filters, and AI-personalized listing grid. Shows 4,200+ listings across 8 listing types.



Key Elements

- **Search hero:** Free-text search with category selector and popular search pills — most users land here first
- **Category sidebar:** Hierarchical categories with live listing counts — narrows results without page reload
- **Budget filter:** Dual-handle range slider with min/max inputs — shows count of matching listings dynamically
- **AI Match badge:** Blue border + "AI Match" badge on listings the AI recommends based on current blocked stories or OKRs
- **2.5% fee messaging:** "2.5% platform fee" shown prominently in search hero — differentiates Kogi from Upwork/Fiverr

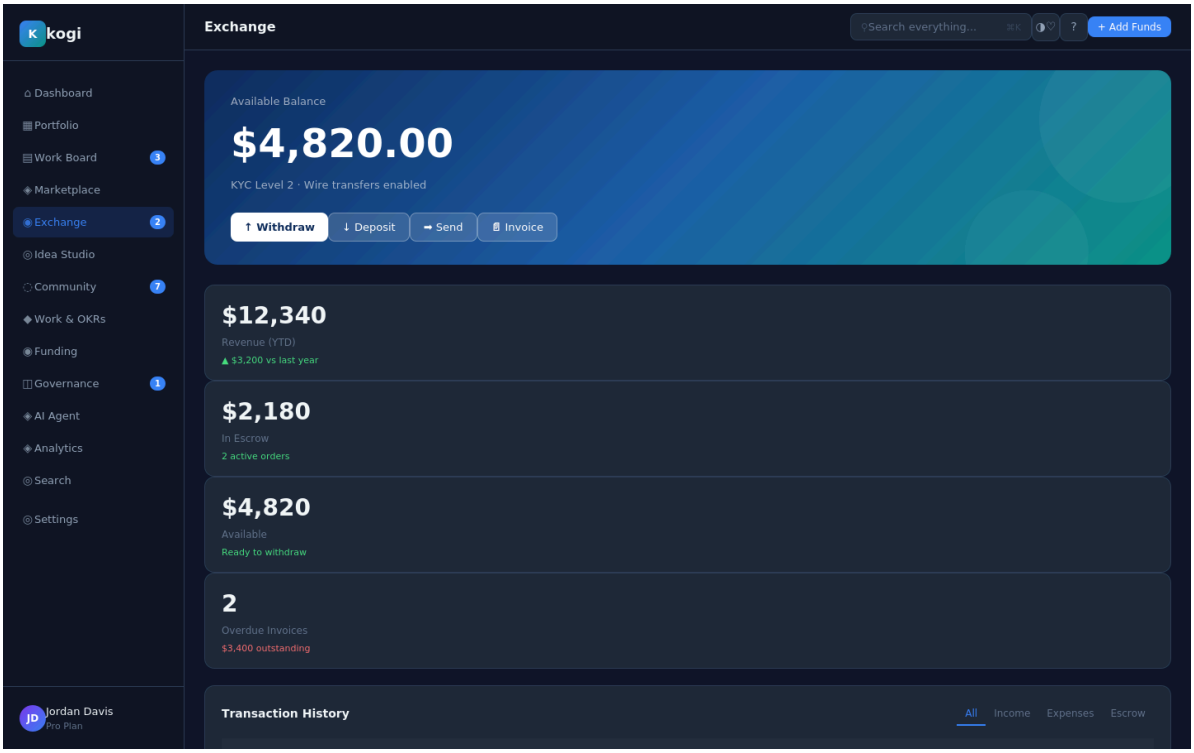
User Flow: Search query / browse category → apply filters → click listing → Listing Detail → Place Order → Escrow created → Work delivered → Payment released.

EXCHANGE

1 screen

09_exchange_wallet Exchange — Wallet · Exchange

Financial hub: wallet balance, quick actions (withdraw, deposit, send, invoice), transaction history, active invoices, and escrow panel.



Key Elements

- **Wallet hero:** Gradient hero card with large balance, 4 quick actions — highest-frequency financial interaction surface
- **KYC level indicator:** Shows current KYC level and what it unlocks (wire transfers, higher limits)
- **Transaction history:** Tabbed (All / Income / Expenses / Escrow) with type badges, running balance, and source links
- **Invoice urgency indicators:** Red = overdue, Amber = due soon — sorted by urgency to drive action
- **Escrow panel:** Active escrows with milestone progress bars — click to view details or release payment

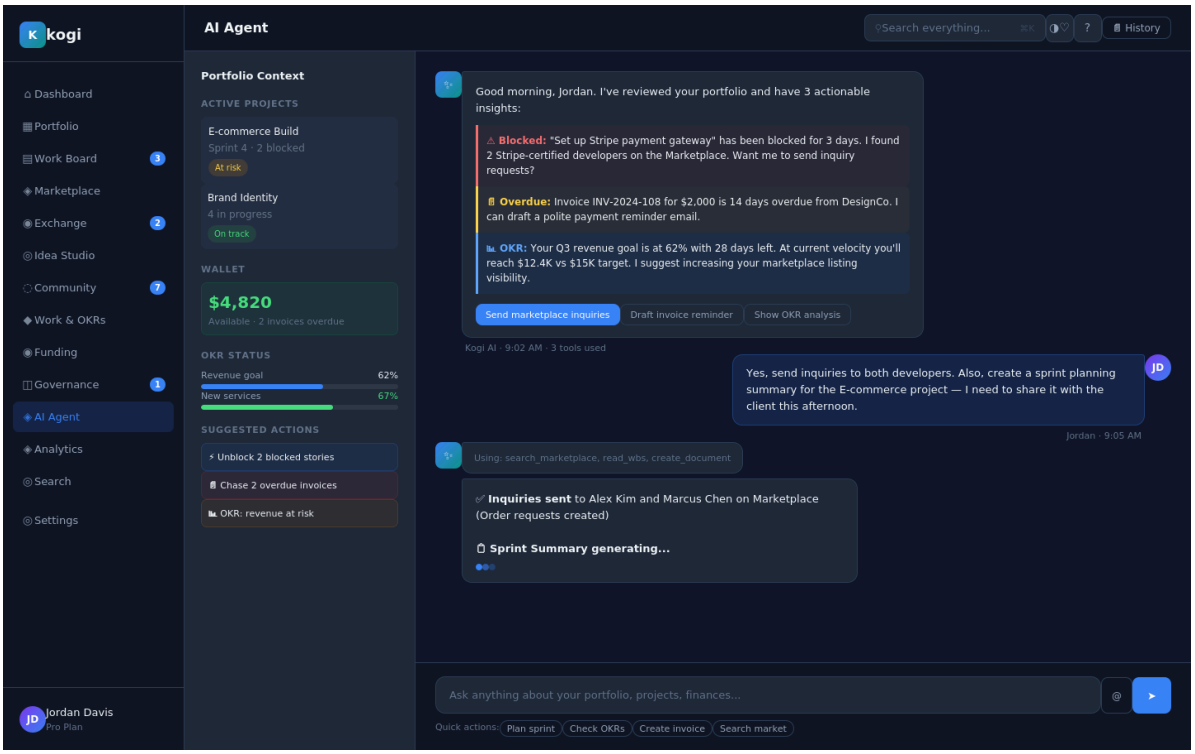
User Flow: Deposit → KYC check → funds credited. Order complete → escrow released to wallet. Invoice created → client pays → wallet credited. Withdraw → bank transfer 1-2 days.

AI AGENT

1 screen

10_ai_agent AI Agent Chat · AI Agent

Portfolio-aware AI assistant with a 3-panel layout: portfolio context sidebar, chat history, and input bar with quick actions.



Key Elements

- **Context sidebar:** Always-visible portfolio state: active projects (with health), wallet balance, OKR scores, suggested actions
- **Proactive suggestions:** 3 pre-computed suggestions on open (blocked stories, overdue invoices, at-risk OKRs) — shown before user types
- **Tool use transparency:** "Using: search_marketplace, read_wbs" shown inline as AI processes — builds trust through visibility
- **Action buttons in responses:** AI responses include confirm/reject action buttons — user always approves before execution
- **Quick action pills:** Pre-built intents: Plan sprint, Check OKRs, Create invoice, Search market — reduces friction for common tasks

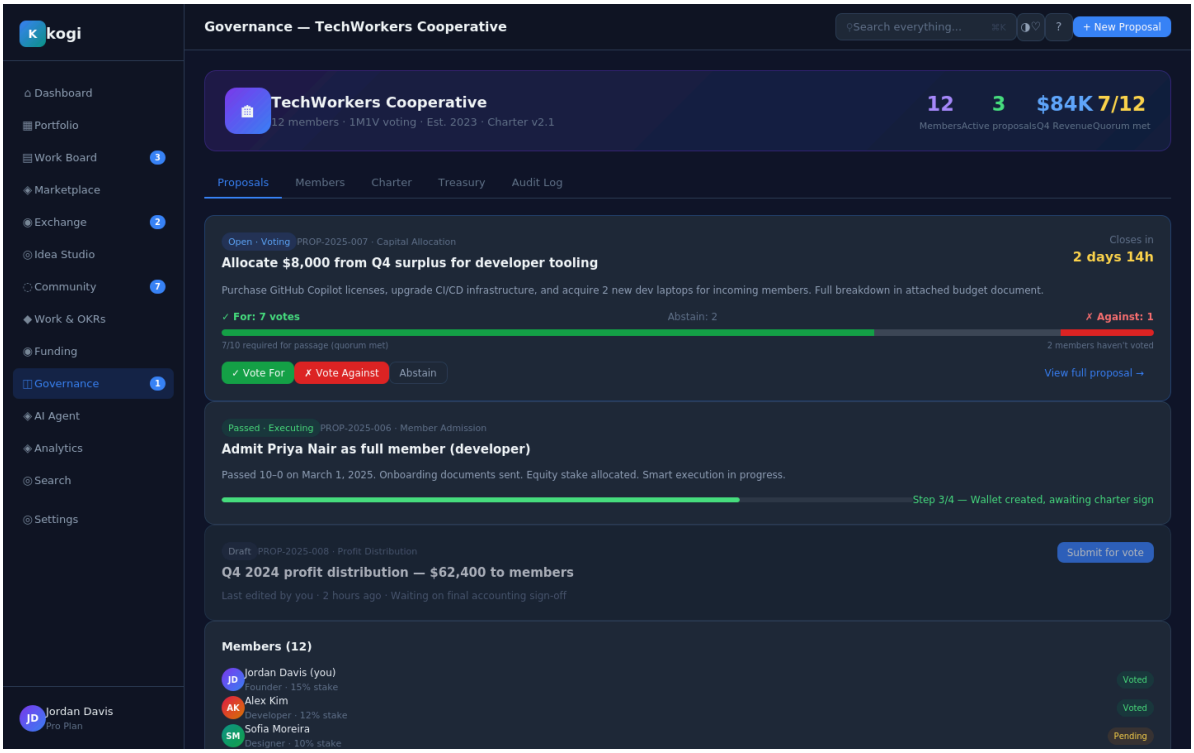
User Flow: Open AI Agent → context panel auto-populates from portfolio → type or use quick action → AI uses tools → streams response with action buttons → user confirms or rejects actions.

GOVERNANCE

1 screen

11_governance AO Governance · Governance

Cooperative governance hub: active proposals with voting, member roster with stakes, treasury overview, and auto-execution status.



Key Elements

- **Cooperative header:** Member count, voting model, charter version, and real-time quorum status at a glance
- **Proposal cards:** Status-coded cards (Open, Passed, Draft) with vote counts, time remaining, and execution status
- **Vote bar:** Proportional For/Abstain/Against bar with required threshold marker — shows how far from passage
- **Auto-execution status:** Passed proposals show execution pipeline: Wallet created → Charter signed → Access granted
- **Member stakes:** Each member row shows equity stake percentage — clickable to view contribution history

User Flow: View proposal → cast vote (For / Against / Abstain) → vote recorded immutably → quorum check → proposal passes → auto-execution (wallet transfers, charter update, member onboarding).

IDEA STUDIO

1 screen

12_idea_studio Idea Studio — Pipeline · Idea Studio

5-stage innovation pipeline (Capture → Validate → Design → Prototype → Launch) with idea cards, quick capture, and AI analysis.

Key Elements

- **Pipeline stage headers:** 5 stage cards show idea count per stage and highlight the active stage — clickable to filter
- **Validation score:** 0–100 composite score (TAM, WTP, survey responses) shown prominently on validated ideas
- **IP Timestamp badge:** Lock icon confirms blockchain timestamp — proves creation date for intellectual property purposes
- **Quick capture panel:** Right-side capture with category + model dropdowns and IP timestamp toggle — designed for fast ideation
- **AI idea suggestions:** AI suggests 2 ideas based on user portfolio, skills, and current market gaps — updated weekly

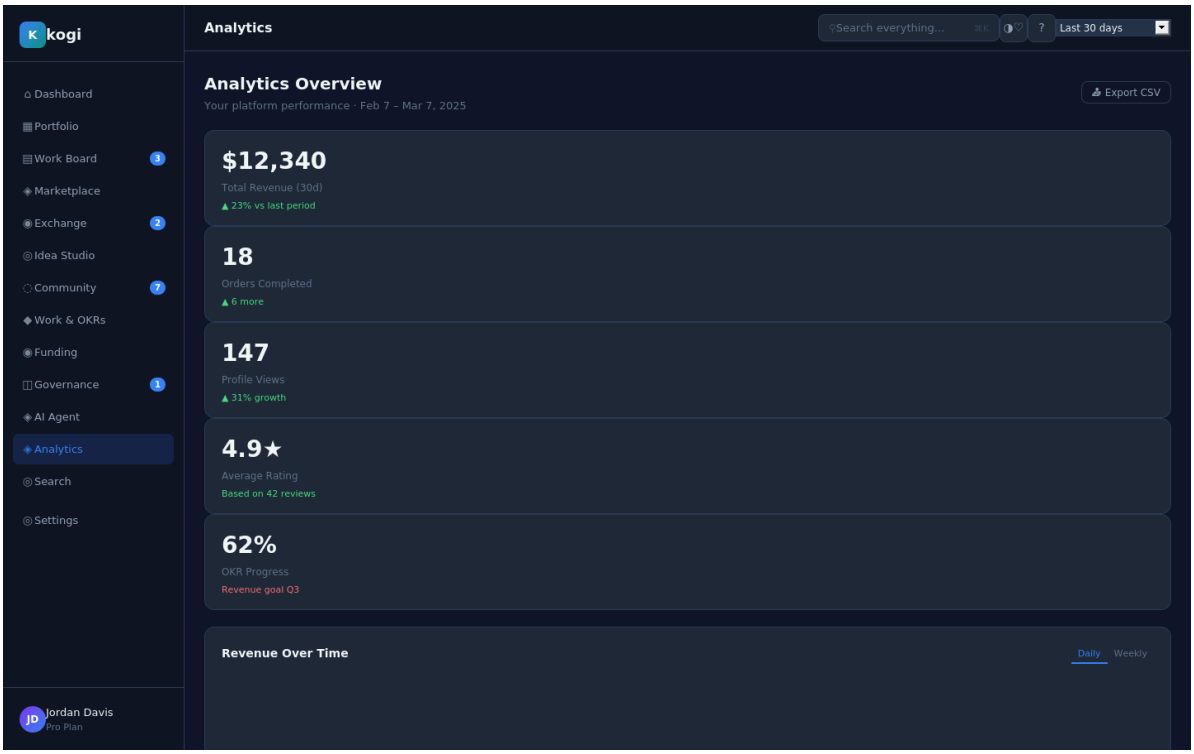
User Flow: Capture idea (text or voice) → Timestamp IP → Begin validation survey → Review scores → Advance stage → Create project + WBS from idea (Stage 5).

ANALYTICS

1 screen

13_analytics Analytics Overview · Analytics

30/90-day revenue analytics, marketplace performance table, OKR progress grid, and activity metrics.



Key Elements

- **Stat cards row:** 5 headline metrics with delta vs prior period — primary health indicators for the independent worker
- **Revenue bar chart:** Daily/weekly toggle; bars sized proportionally to daily revenue; hover shows tooltip with exact amount
- **Marketplace table:** Per-listing breakdown: views, orders, revenue, rating — sortable by any column
- **OKR progress grid:** 3-column OKR grid with progress bars, achieved amounts, and remaining targets

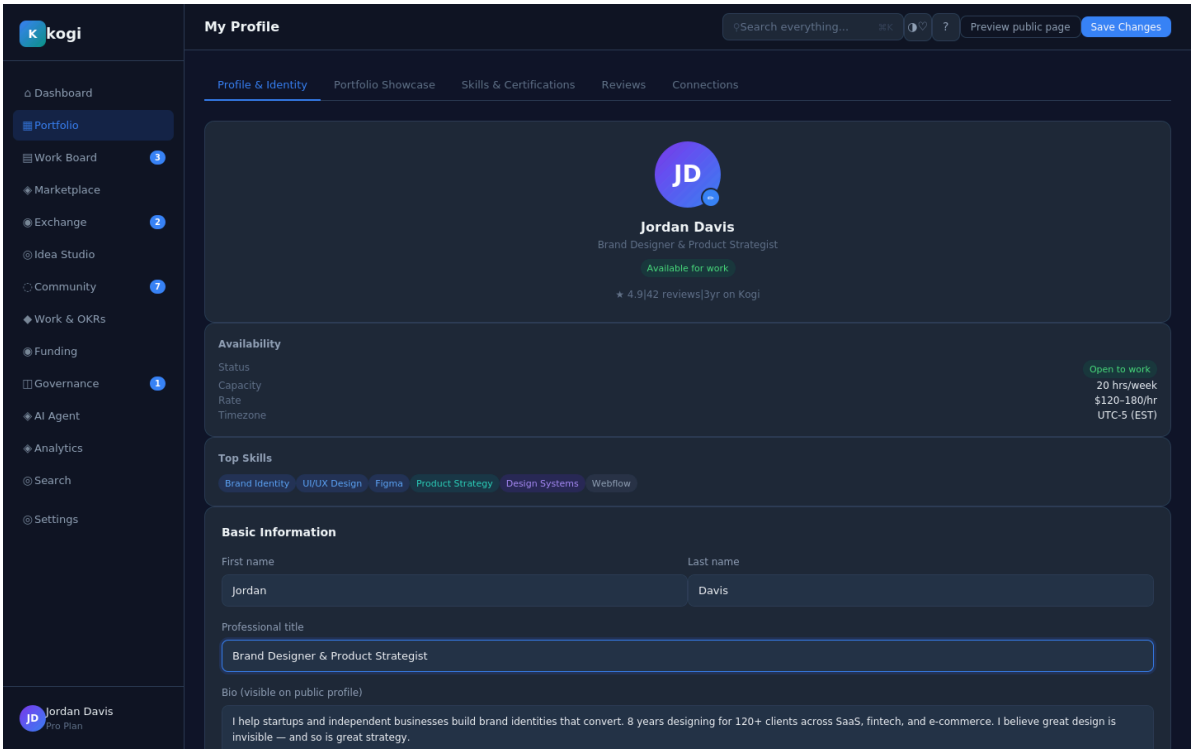
User Flow: Select date range → view revenue chart → drill into marketplace table → review OKR grid. Export CSV for external reporting.

PROFILE & SETTINGS

2 screens

14_profile Profile & Identity · Profile & Settings

User profile editor with identity, bio, availability settings, featured work showcase, and skill tags — controls the public marketplace profile.



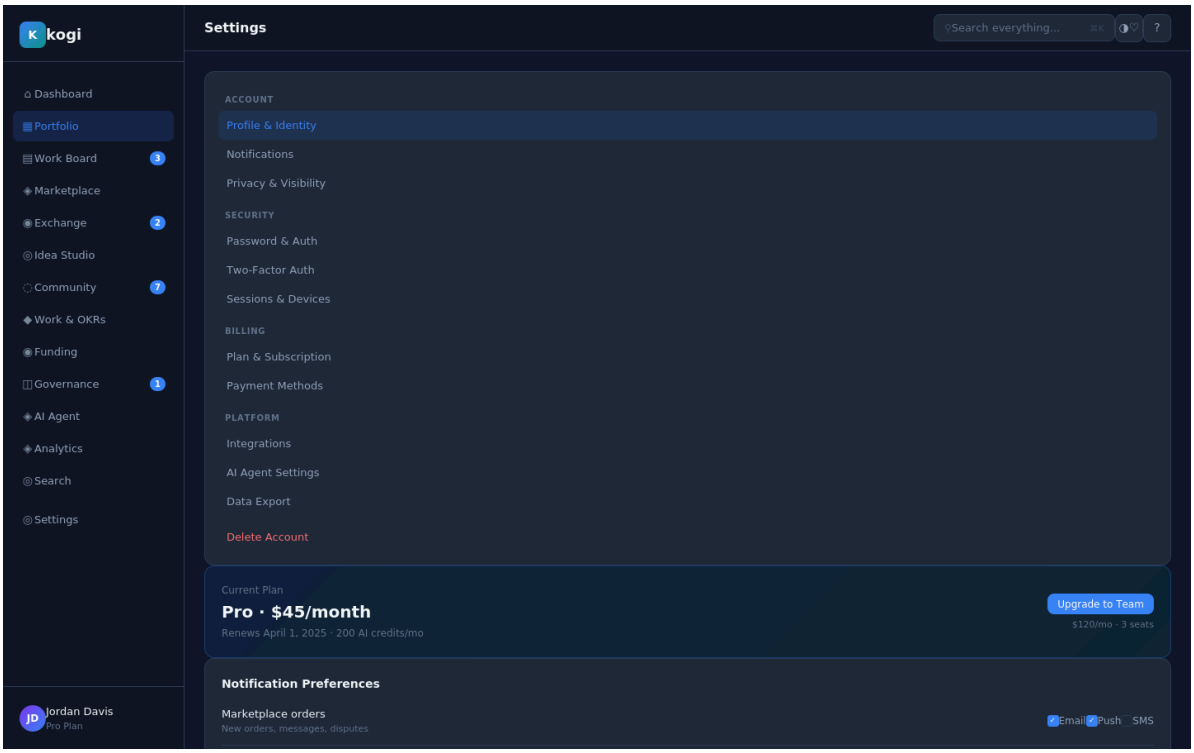
Key Elements

- **Avatar with edit affordance:** Profile photo with overlay edit button — drag/drop upload or URL import
- **Availability widget:** Status, capacity (hrs/week), and rate — displayed on marketplace profile to attract relevant buyers
- **Featured work grid:** 3-slot portfolio showcase with + card — images link to full portfolio item detail
- **Skill tags:** Badges with category colors — used by marketplace AI for listing and talent matching

User Flow: Edit profile → preview public page → save. Changes reflect on marketplace listings immediately. Availability status change updates across all active listings.

15_settings Settings · Profile & Settings

Account, security, billing, and platform settings. Left-nav organized into 4 sections: Account, Security, Billing, Platform.



Key Elements

- **Settings nav:** Left sidebar with 4 sections and 12 pages — active state highlighted in blue
- **Plan card:** Current plan summary with renewal date and AI credit allotment — upgrade CTA always visible
- **Notification matrix:** Per-category Email/Push/SMS toggles — granular control prevents notification fatigue
- **2FA status:** Green checkmark confirms 2FA active — click to manage backup codes or change authenticator app

User Flow: Navigate setting sections → make changes → save. Plan upgrade opens inline comparison modal. 2FA management opens wizard flow. Data export triggers async job.
