Executive Summary

The Opportunity

Every organisation on Earth — 500 million of them — runs on a fragmented stack of 12–28 disconnected software tools. None of those tools share a common model of the organisation. The result is $4.5 trillion in annual compliance costs, missed deadlines, opaque financials, and management time consumed by data reconciliation instead of value creation.

UME solves this with the world's first Organisation Operating System.

UME is a single Rust-based platform providing 42 integrated domain modules: legal entity management, accounting and finance, human resources, governance, risk, compliance, sales, marketing, operations, supply chain, IT, and strategy. Every module shares a common organisational model, communicates via a unified event bus, and is governed by a single RBAC and audit engine.

Unlike ERP systems, UME is not a suite of loosely coupled applications bolted together. The kernel mediates all data access, all authorisation, and all cross-domain communication. A change in one domain — a new hire, a period lock, a KRI threshold breach — propagates automatically to all affected domains without manual intervention.

The Ask

Round	Amount	Use of Funds	Target Close
Seed	$2.5M	Platform MVP, core team (12 FTE), 20 jurisdiction policy packs, 100 design customers	Q2 2026
Series A	$12M	GA launch, sales & marketing, 45+ jurisdictions, Java client, Kubernetes deployment	Q4 2026
Series B	$40M	International expansion, marketplace ecosystem, AI features, enterprise sales motion	Q3 2027

Key Metrics at Series A Close (Projected)

Metric	Target
Annual Recurring Revenue (ARR)	$3.2M
Paying Organisations	320

Average Contract Value (ACV)	$10,000 per annum
Net Revenue Retention (NRR)	115%+
Gross Margin	78%+
Customer Acquisition Cost (CAC)	$4,800
CAC Payback Period	< 7 months

1. Company Overview

1.1 Mission & Vision

Mission

To give every organisation — from a sole trader to a global enterprise — a single operating system that holds their complete organisational context and provides every capability they need to govern, operate, and grow.

Vision

A world where organisational dysfunction is not the norm. Where no compliance deadline is missed because a paralegal forgot to update a spreadsheet. Where a CFO can see the group cash position in real time, not after a 10-day consolidation exercise. Where an entrepreneur spends their time building, not reconciling tools.

1.2 Company Structure

Detail	Information
Legal Name	UME Technologies Ltd (operating name: UME)
Jurisdiction	England & Wales (incorporated)
Structure	Private Limited Company; planned Delaware C-Corp incorporation prior to Series A for US investor alignment
Founded	2025
Headquarters	London, UK (with distributed engineering team)
Primary Market	Global — English-speaking markets first (UK, US, AU, CA, IE); expansion into EU and APAC from Year 2
IP Ownership	All IP held by UME Technologies Ltd; no third-party IP embedded in core platform
Open Source Policy	Platform core is proprietary; jurisdiction policy pack schema is open; SDK is open-source under Apache 2.0

1.3 Founding Story

UME was founded by a team who repeatedly experienced the same problem: as organisations they worked in grew, the cost of operating those organisations grew faster than the revenue. Not because the work was harder — because the tools didn't talk to each other. Every growth milestone brought a new tool, a new integration project, and a new category of data that needed manual reconciliation.

The founding team spent 18 months researching the market before writing a line of code. They talked to 300+ founders, CFOs, COOs, legal officers, and compliance managers across 12 countries. The finding was consistent: no one was happy with their software stack, everyone was paying too much for too little integration, and the problem got worse, not better, as organisations grew.

The decision to build in Rust was deliberate and non-negotiable. The correctness guarantees Rust provides — memory safety, type-safe domain models, no runtime exceptions — are not engineering

preferences. They are product requirements for a platform that handles money, compliance obligations, and people data simultaneously.

1.4 Current Status

Milestone	Status	Date
Company incorporation	Complete	Q4 2025
Founding team assembled (5 FTE)	Complete	Q1 2026
Architecture and technical specification complete	Complete	Q1 2026
Kernel + 8 core modules (alpha)	In progress	Q2 2026
Design customer programme (20 orgs)	Recruiting	Q2 2026
Seed round close	Targeting	Q2 2026
Milestone 1 (GA) launch	Planned	Q3 2026
Series A close	Targeting	Q4 2026

2. Market Analysis

2.1 Market Size & Structure

The market for business management software is vast, fragmented, and growing. No single platform currently addresses the full scope of what UME provides. UME's total addressable market is the sum of the markets it replaces, not one sub-segment of it.

Market Segment	2025 Market Size	2028 Projected	CAGR	UME Relevance
ERP / Business Management Software	$62B	$90B	13.1%	Direct replacement for SME ERP stacks
HR Software & Services	$38B	$58B	14.8%	HR module replaces HRIS for sub-5K organisations
Accounting & Financial Software	$20B	$31B	15.6%	Finance module replaces SME accounting tools
GRC (Governance, Risk, Compliance)	$25B	$44B	20.8%	GRC/Risk modules accessible at all scales
CRM Platforms	$71B	$114B	17.0%	CRM module for orgs that don't need Salesforce
Project & Work Management	$14B	$24B	19.7%	Work module replaces Jira/Asana for org-integrated teams
Legal Entity Management	$3B	$6B	26.0%	Chombo directly addresses this underserved market
Total Addressable Market	$233B	$367B	—	Conservative estimate; excludes adjacent categories

SAM & SOM

Serviceable Addressable Market (SAM): Organisations with 1–5,000 employees that currently use ≥3 separate business tools and are actively evaluating consolidation. Estimated at $52B by 2028 based on 14M organisations globally meeting these criteria.

Serviceable Obtainable Market (SOM): 0.5% of SAM captured in Years 1–3. Target: $260M ARR by end of Year 3 (2029). This represents approximately 26,000 organisations at a $10,000 average ACV.

2.2 Target Customer Segments

Segment	Size	Characteristics	UME Entry Point	ACV Range
Solo / Micro (1–5 people)	300M globally	Sole traders, freelancers, early-stage startups; use Xero/QuickBooks + spreadsheets	Embedded mode; compliance and finance from day one	$199–$599/yr
Small Business (5–50 people)	60M globally	Growing teams; starting to outgrow their accounting tool; compliance becoming real	Finance + HR + Legal Entity; replace Xero + BambooHR + lawyer's calendar	$600–$3,600/yr
Growth Company (50–500 people)	5M globally	Series A–C; multiple entities forming; GRC suddenly matters; hiring fast	Finance + HR + GRC + Risk + Sales; replace partial ERP + HRIS + GRC tool	$3,600–$18,000/yr

Mid-Market (500–5,000 people)	500K globally	Multiple entities; compliance in multiple jurisdictions; integration costs are significant	Full platform deployment; displace partial ERP stack; enterprise SSO + RBAC	$18,000–$120,000/yr
Non-Profit / NGO	10M globally	Restricted fund accounting; grant lifecycle; trustee governance; donor reporting	Finance (restricted funds) + GRC + HR + Board; sector-specific value proposition	$600–$12,000/yr
Government Dept / Public Body	500K globally	Appropriations compliance; public procurement; FOI management; public audit trail	Chombo + Finance + GRC + IT; replaces siloed government tools	$6,000–$60,000/yr
Investment Fund	200K globally	LP capital accounts; portfolio company tracking; IC governance; carry calculations	Investment + Finance + HR + Board; replaces expensive fund management software	$6,000–$60,000/yr

2.3 Market Trends Driving Adoption

Trend	Impact on UME Opportunity
Regulatory complexity increasing globally	Every new jurisdiction, every new ESG framework, every new reporting requirement creates a new demand for Chombo's policy pack model. Compliance cost is rising; UME automates it.
Remote-first organisations need digital-first operations	Distributed teams cannot rely on physical presence for process coordination. UME's event-driven workflow automation is a direct response to this structural shift.
SME market maturing beyond spreadsheets	A generation of founders who grew up on Notion, Slack, and Figma will not tolerate operating their company in Excel. They expect software-grade operations.
Multi-entity structures proliferating	Holding companies, joint ventures, and subsidiary structures are no longer the exclusive domain of large enterprises. Seed-stage founders are multi-entity from year one.
ESG reporting becoming mandatory	EU CSRD, UK TCFD, and US SEC climate disclosure rules are creating demand for ESG data management. UME's ESG module (M3) is built to absorb this demand.
Open banking enabling automated reconciliation	PSD2 in Europe, CDR in Australia, and emerging open banking in the US enables UME's Finance module to provide automated bank feed reconciliation at a fraction of current cost.
AI/ML lowering intelligence infrastructure cost	UME's M4 AI features (deal scoring, anomaly detection, predictive cash flow) become commercially viable as foundation model costs decline.

2.4 Competitive Landscape

No direct competitor offers the combination of breadth, integration depth, and legal entity intelligence that UME provides. The competitive landscape is segmented by functional area.

Competitor	Category	Strengths	Critical Gaps vs. UME	UME Positioning
SAP S/4HANA	Enterprise ERP	Deep financial capability; global; mature	Minimum $500K implementation; no SME path; no legal entity	UME is 100× less

			intelligence; GRC is add-on	expensive; accessible without an SI; entity compliance built-in
Oracle NetSuite	Cloud ERP	Strong financials; multi-entity support	Complex to implement; $30K+ minimum ACV; no integrated GRC/Risk; no compliance automation	UME is faster to value; GRC and compliance are first-class, not add-ons
QuickBooks / Xero	SME Accounting	Easy to use; large accountant network; integrations	Accounting only; no entity management; no HR; no GRC; no risk; no analytics beyond basic P&L	UME includes everything Xero does plus HR, GRC, compliance, risk, and strategy
Workday	Enterprise HCM	Deep HR and finance integration; strong analytics	$1M+ implementations; no legal entity; no GRC; no sales; no supply chain	UME's HR is comparable; 10× cheaper; includes domains Workday never addresses
Odoo	SME All-in-One	Broad module set; open-source option	Modules share a name but not a deep organisational model; weak on compliance; no entity intelligence	UME's modules share a kernel, not just a logo; compliance is not an afterthought
Diligent / CT Corporation	Legal Entity Mgmt	Deep entity compliance expertise	Standalone tools; do not integrate with Finance, HR, or Risk; expensive	UME makes Chombo's capability part of a full operational platform

LogicGate / MetricStream	GRC Platforms	Deep GRC frameworks; enterprise penetration	Disconnected from operational data; requires manual data entry; expensive; no SME path	UME's risk updates from live operatio nal data; no manual KRI entry required

2.5 Competitive Moat

Moat Element	Description	Time to Build (Competitor)
Jurisdiction policy pack library	45+ jurisdictions at launch; growing to 65+ by Year 2. Each pack requires legal expertise to build and ongoing maintenance. This is a content moat, not just a software moat.	3–5 years and dedicated legal teams per jurisdiction
Kernel-mediated architecture	All modules share a single organisational model via the kernel. This depth of integration is not achievable by connecting existing point solutions with an API layer.	Full rebuild; 3–4 years for a team that understands the architecture
Network of organisational context	As UME accumulates more organisational data (with consent), cross-organisational patterns (benchmark KPIs, risk appetite norms, compliance timing) become a data moat.	Cannot be replicated without the installed base
Module ecosystem (post-M3)	A marketplace of third-party modules with a signed, versioned SDK creates a flywheel: more modules attract more organisations; more organisations attract more module developers.	18–24 months after SDK publication; requires installed base to attract developers
Switching cost	When UME becomes the system of record for legal entities, finance, HR, GRC, and operations simultaneously, the cost of switching is the cost of migrating all of those domains at once.	Accrues naturally with deployment depth; reaches high switching cost by Year 2 for typical customer

3. Product

3.1 The Core Insight

Why UME Works When Others Have Failed

The fatal flaw in every "all-in-one" platform is that the modules share a brand, not a data model. When Odoo's HR module and its Finance module need to talk, they do so through an API call — the same way any two external systems would. There is no shared concept of "the organisation" that both modules understand.

UME inverts this entirely. The kernel holds the authoritative organisational model — entities, structure, people, obligations, permissions — and every module accesses it through a common facade. A payroll run in Finance automatically knows the employment terms from HR, the org unit from Administration, and the compliance obligations from Chombo. Not because those modules were integrated. Because they share a kernel.

3.2 Platform Architecture

UME is built on four layers, each with a strict dependency rule that prevents architectural decay over time:

Layer	Components	Dependency Rule
Layer 0 — Core	ume_core: shared types, traits, error model, event schema, RBAC primitives	Zero external dependencies. The common language of the platform.
Layer 1 — Kernel	ume_kernel: RBAC engine, event bus, storage abstraction, audit chain, supervisor, executor pool, device driver bus	Depends only on ume_core. The infrastructure every module shares.
Layer 2 — Modules	42 domain modules: Finance, HR, Chombo, GRC, Risk, Sales, Marketing, IT, Security, and 33 more	Depend on ume_core only. Cannot import ume_kernel directly. Communicate only via the kernel facade.
Layer 3 — Clients	ume_server (Axum HTTP/WS), ume_runtime (CLI), ume_sdk, Java GUI/Shell/Watch clients	Depend on kernel + modules. The user-facing surface.

This architecture delivers three properties that competitors cannot match without a full rebuild: (1) Fault isolation — a broken module cannot crash the kernel or other modules. (2) Domain isolation — modules cannot accidentally read each other's data by calling each other directly; all cross-domain communication is via the event bus. (3) Correctness — every operation is authorised by the same RBAC engine and logged to the same cryptographic audit chain.

3.3 The 42 Organisation Modules

UME ships with 42 built-in modules covering every operational domain. They are activated per organisation — a freelancer activates 4 modules; a mid-market CFO activates 18. The platform works for both without modification.

Domain Area	Modules	Launch Milestone
Organisation & Platform	Administration, Design System, Portal, Process & Orchestration, Templates, Communications	Milestone 1 (Q3 2026)
Finance & Accounting	Finance (full double-entry, multi-entity, payroll, forecasting), Investment, Portfolio	M1 + M3
Legal & Compliance	Legal Entity Management (Chombo), GRC, Security & Privacy	M1 + M2
People	Human Resources, Learning & Development, Teams & Cooperatives	M1 + M2 + M3
Governance	Risk Management, Board & Governance, ESG	M1 + M2 + M3
Revenue	CRM, Sales, Marketing (Soko)	M2
Operations	Work Management, Operations, Supply Chain, Schedule, IT & Assets, Engineering, Production	M1 + M2 + M3
Intelligence	Analytics & Reporting, Knowledge Base, Master Data Management	M1 + M2 + M3
Infrastructure	Backup & Recovery, Custom Modules SDK (×2), Product Management, Requirements Mgmt	M1 + M3
Sector-Specific	Business Development, Content Management, PR & Branding, Office & Facilities	M2 + M3

3.4 Killer Features by Persona

Persona	Feature That Changes Everything	Why No Competitor Offers This
Founder / CEO	One-screen view of: group structure, cash position, compliance status, headcount, and open risks — updated in real time	Requires all five domains to share a kernel; no competitor has this architecture
CFO	Consolidated group P&L, balance sheet, and cash flow with automated intercompany elimination — available in real time, not at month end	Requires multi-entity ledger with shared intercompany accounts in a single transaction boundary
Legal Officer	Compliance obligations automatically derived from entity facts across 45+ jurisdictions; filing calendar built from organisational data, not manual configuration	Requires the entity model and the compliance rule engine to share the same data; point solutions cannot do this
Risk Manager	KRIs that update automatically from Finance, HR, IT, and Operations data; threshold breaches escalated in < 5 minutes without a human polling the data	Requires risk indicators to be subscribed to domain events from other modules; only possible on a shared event bus
HR Manager	New hire → access provisioning, equipment request, policy acknowledgments, and payroll setup — all triggered automatically	Requires HR, IT, Finance, and Admin to share the same process engine and event model
Non-Profit Director	Restricted fund P&L and balance sheet; fund utilisation vs. donor restriction compliance; grant lifecycle from application to close	Requires fund-level sub-ledgers and restriction enforcement built into the chart of accounts — not an add-on

3.5 Technical Differentiation

Technical Choice	Business Implication
Rust (primary language)	Memory safety by construction. No garbage collection pauses. Type-safe domain models where the compiler enforces business rules. The correctness guarantees justify the build complexity.
Single-process kernel architecture	All 42 modules in one process. Shared memory for events (microsecond latency). No network hops between domains. Sub-100ms P50 API response even for cross-domain operations.
Cryptographic audit chain	SHA-256 hash-chained audit log. Every record includes the hash of the previous record. Tamper detection without a blockchain. Regulatory-grade audit trail from day one.
Jurisdiction policy packs	Compliance rules as versioned, machine-readable data files. New jurisdiction = new pack file, not a code change. Rules can be updated without a platform release. Regulatory changes ship as data.
Module SDK with MockKernel	Third-party developers build and test modules without a running kernel. The MockKernel provides all kernel services in-process. Test coverage of 80%+ is achievable before a line of integration is written.
Embedded mode (SQLite)	Zero-dependency single binary. A 1-person business on a laptop has the same platform as an enterprise on Kubernetes. The organisational model scales with the organisation, not the other way round.

3.6 Product Roadmap

Milestone	Quarter	Key Deliverables	Revenue Trigger
M1 — Foundation	Q3 2026	42 modules (core set), kernel, embedded + Docker mode, 20 jurisdiction packs, REST API, Java clients	GA launch; begin commercial sales; Seed customers convert to paid
M2 — Growth	Q4 2026	Multi-entity consolidation, GRC, Sales & CRM, Marketing (Soko), Kubernetes, SSO, 45 jurisdiction packs	Series A deployment; growth segment activation; partnership channel launch
M3 — Ecosystem	Q1 2027	Module marketplace, Board module, ESG, Investment, Supply Chain, BI connectors, module signing	Marketplace revenue share begins; enterprise segment entry; partner module revenue
M4 — Intelligence	Q2 2027	AI deal scoring, anomaly detection, predictive cash flow, GraphQL, sector modules, I18n	AI-tier pricing; government and university segment activation; international expansion revenue

4. Business Model

4.1 Revenue Model

UME operates a subscription SaaS model with four tiers. Pricing is per-organisation (not per-seat for the base platform), with per-seat charges applied only to modules that are inherently per-user (HR, Learning, Portal). This aligns pricing with value delivered to the organisation rather than penalising growth.

Tier	Target Segment	Monthly Price	Included Modules	Per-Seat
Starter	Solo / Micro (1–5 people)	$49/mo	Finance, Chombo (1 entity), Administration, Portal, Backup	—
Business	Small Business (5–50 people)	$199/mo	All Starter + HR, GRC (basic), Risk (basic), Work, CRM, Analytics	$4/user/mo above 10 users
Growth	Growth Company (50–500 people)	$799/mo	All Business + Multi-entity Finance, full GRC, Risk, Sales, Marketing, IT, Security	$6/user/mo above 50 users
Enterprise	Mid-Market (500–5,000+)	$2,499/mo	All modules; dedicated infrastructure option; SLA; SAML SSO; custom policy packs	$8/user/mo above 200 users

Additional Revenue Streams

Jurisdiction Policy Pack Add-ons — Additional jurisdictions beyond the included allocation: $49–$299/jurisdiction/yr

Professional Services — Implementation, data migration, custom module development: $200–$400/hr

Marketplace Revenue Share — 25% of third-party module subscription revenue (post-M3)

AI Tier (post-M4) — AI analytics, predictive features, anomaly detection: +$199–$999/mo add-on

Training & Certification — Administrator and developer training programmes: $499–$1,999 per cohort

4.2 Unit Economics

Metric	Starter	Business	Growth	Enterprise
Monthly Price	$49	$199	$799	$2,499+
Annual Contract Value (ACV)	$588	$2,388	$9,588	$29,988+
Gross Margin (target)	72%	78%	82%	85%
Customer Acquisition Cost (CAC)	$280	$1,200	$4,800	$18,000
CAC Payback Period	5.7 months	6.1 months	7.0 months	7.2 months
LTV (5-year, 90% retention)	$2,646	$10,746	$43,146	$134,946+
LTV / CAC Ratio	9.4×	9.0×	9.0×	7.5×

4.3 Gross Margin Structure

UME's cost of revenue is dominated by infrastructure, jurisdiction policy pack maintenance, and customer support. Gross margins improve significantly as the platform matures and support costs decrease through better documentation, onboarding automation, and the shift toward higher-ACV customers.

Cost of Revenue Component	Year 1	Year 2	Year 3
Infrastructure (cloud compute, storage, CDN)	18%	12%	9%
Jurisdiction policy pack maintenance	8%	6%	5%
Customer support (headcount)	12%	8%	6%
Payment processing fees (2%)	2%	2%	2%
Total Cost of Revenue	40%	28%	22%
Gross Margin	60%	72%	78%

4.4 Go-To-Market Strategy

UME's GTM strategy is designed for the reality of selling a new category: start narrow with a segment that feels the pain most acutely, prove the value proposition at scale, then expand horizontally to adjacent segments with the same playbook.

Phase 1 — Seed (Q2–Q4 2026): Design Customer Programme

Before full commercial launch, UME recruits 20 design customers — early adopters who get significantly discounted access in exchange for weekly feedback sessions, co-development of their most critical workflows, and permission to be cited as reference customers at launch.

Design Customer Criteria	Target Profile
Organisation size	5–200 employees; at least 2 entities in at least 2 jurisdictions
Current pain	Paying for 4+ disconnected tools; have experienced at least one compliance failure
Engagement commitment	Weekly 60-minute feedback session; access to platform logs and usage data (anonymised)
Reference commitment	Public case study on launch; willing to speak to investors and future customers
Commercial terms	50% discount on Business or Growth tier for 24 months from GA launch

Phase 2 — Launch (Q3 2026): Product-Led Growth + Founder Community

UME launches with a free 14-day trial and an embedded-mode free tier (1 entity, Finance + Chombo only) designed to put the platform in the hands of founders at the moment they incorporate. The go-to-market is product-led: the value of Chombo's automatic compliance calendar is visible within minutes of entering an entity, before any payment is required.

GTM Motion	Channel	Target Volume (Q3–Q4 2026)
Product-led trial	In-product onboarding; Chombo free tier for new incorporations	500 trial activations/mo

Founder community	Indie Hackers, ProductHunt, founder Slack communities, Startup Grind	2,000 community members; 50 direct sign-ups/mo
Accountant & solicitor channel	Partnership with 20 UK/US accountancy firms and solicitors to refer clients	100 referred sign-ups in first 6 months
Content marketing	SEO-optimised content targeting "multi-entity accounting", "UK company compliance", "GRC for startups"	5,000 organic monthly visitors by month 6
Direct outreach	Outbound to 200 design customer candidates; 20 signed, 60+ pipeline for Year 2	20 design customers signed; 60+ Sales pipeline

Phase 3 — Scale (Q4 2026–Q4 2027): Partner Channel + Mid-Market Motion

With proven design customer case studies and product-market fit signals, UME invests in two new channels: an accountant/professional services partner programme, and a direct enterprise sales motion for organisations with 200+ employees that have an identifiable sponsor (usually CFO, COO, or CLO).

Channel	Mechanism	Year 2 Revenue Contribution
Accountant Partner Programme	Revenue share (20%) for referred and managed UME deployments; co-branded Chombo compliance calendar	35% of new ARR
Law Firm & Compliance Partner Programme	Entity setup and compliance calendar powered by UME; white-label option available	15% of new ARR
Enterprise Direct Sales	2 enterprise AEs hired Q1 2027; 6-month sales cycle; minimum $30K ACV deals	25% of new ARR
Marketplace / Ecosystem	Third-party module developers bringing new customers via sector-specific modules	5% of new ARR (growing)
Organic / PLG (continued)	Product improvements drive ongoing self-serve activation	20% of new ARR

4.5 Customer Success & Retention

UME's retention model is built on deployment depth. A customer using 3 modules has a switching cost. A customer using 12 modules — with their entity structure, historical financials, HR records, and compliance history in UME — has a very high switching cost. Customer Success is structured to accelerate module adoption, not just to manage support tickets.

CS Motion	Trigger	Goal
Onboarding programme (all tiers)	Trial activation → paid conversion	Time-to-first-value < 30 minutes; Finance + Chombo configured in first session
30-60-90 day adoption reviews	Customer signs contract	Module adoption target: 4+ modules by Day 90; identify expansion module candidates
Quarterly Business Reviews (Growth+)	Quarterly, all Growth and Enterprise accounts	Executive alignment; benchmark against peer organisations; expansion planning
Health score monitoring	Continuous; alert at 60-day inactivity	CSM outreach before churn; proactive intervention

Expansion plays	Module adoption thresholds	Upsell: multi-entity, GRC, Risk, AI tier; triggered by CS automation when usage signals readiness
Renewal automation	90 days before renewal	Auto-renewal for Starter/Business; proactive renewal QBR for Growth/Enterprise

5. Operations

5.1 Technology & Infrastructure

Component	Technology Choice	Rationale
Platform language	Rust (1.75+)	Memory safety; performance; type-system correctness guarantees for financial and compliance data
HTTP framework	Axum (Tokio)	Async-first; excellent performance; ecosystem maturity for production web services
Database (standard/enterprise)	PostgreSQL 16+	ACID transactions; excellent JSON support; mature replication and HA tooling; open source
Database (embedded)	SQLite 3.45+	Zero-dependency; single-file; full SQL; sufficient for sub-500 user deployments
Cache / session	Redis 7+	Session storage for JWT revocation; hot cache tier; pub/sub for multi-node events
Message broker (enterprise)	NATS JetStream	Low latency; at-least-once delivery; persistent streams; Kubernetes-native
Container runtime	Docker / Kubernetes (Helm)	Industry standard; Helm chart ships with HPA and PDB for zero-downtime rolling deploys
Java client framework	JavaFX (GUI) + JLine3 (Shell) + OpenTelemetry	Cross-platform GUI; rich TUI shell; built-in observability
Observability	Prometheus + OpenTelemetry + Grafana	Standard stack; alerting on custom metrics (event queue depth, module health)
CI/CD	GitHub Actions + cargo-deny + cargo-tarpaulin	Automated test, lint, dependency audit, coverage gate; release pipeline to GitHub Packages

5.2 Development Methodology

UME follows a trunk-based development model with two-week sprints. All code changes require a reviewed pull request. The CI pipeline enforces: zero compiler warnings, cargo clippy clean, cargo fmt compliance, minimum 70% test coverage for new code, and zero known critical/high CVEs in dependencies.

Practice	Standard
Sprint cadence	2-week sprints; sprint review and retrospective; public internal roadmap board
Code review	Minimum 1 reviewer for features; 2 reviewers for kernel changes; security review for auth/crypto/RBAC changes
Testing	Unit tests (MockKernel); integration tests (Docker-based kernel); e2e tests (full stack with seed data)
Release cadence	Minor versions every 4 weeks; patch releases on demand for security fixes
Documentation	Every module ships with: API docs (OpenAPI), user guide, and admin guide; updated in the same PR as the code
On-call rotation	Engineering on-call from M1 launch; PagerDuty integration; 15-minute P0 response SLA

5.3 Jurisdiction Policy Pack Operations

Jurisdiction policy packs are a critical operational dependency. Each pack must be accurate, current, and maintained as regulations change. This requires a dedicated content operation running in parallel with engineering.

Role	Responsibility	Hire Timing
Head of Regulatory Content	Overall responsibility for pack accuracy and coverage; manages legal counsel network	Month 6 (post-Seed)
Regulatory Content Lead (UK/EU)	Maintain UK and EU pack library; monitor regulatory change; commission expert review for complex jurisdictions	Month 6
Regulatory Content Lead (US/Americas)	Maintain US (federal + 50 state), Canada, and LatAm packs	Month 10 (pre-Series A)
Regulatory Content Lead (APAC)	Maintain AU, NZ, SG, HK, and priority APAC packs	Month 18 (post-Series A)
Legal Counsel Network	Jurisdiction-specific legal experts commissioned for initial pack build and annual review	Ongoing, per-jurisdiction contract basis

5.4 Data Privacy & Security Operations

UME handles sensitive organisational data — financial records, people data, compliance evidence, legal entity information. Security and privacy are not add-on features; they are operational capabilities with dedicated ownership.

Security Capability	Implementation
Encryption at rest	AES-256-GCM for all persisted data; field-level encryption for PII; key management via CryptoVault interface
Encryption in transit	TLS 1.3 mandatory; certificate management via Let's Encrypt (cloud) or customer-provided cert (on-prem)
Penetration testing	Annual third-party pentest from M2; critical findings remediated within 30 days
Vulnerability management	Dependabot for automated dependency CVE alerts; 72-hour SLA for critical CVEs; 14-day for high
SOC 2 Type II	Target certification by Q2 2027 (18 months from GA launch); required for enterprise sales motion
GDPR/CCPA compliance	DPA published; RoPA maintained in UME itself (dogfooding); DSAR workflow built into Security module
Incident response	Documented IRP; tabletop exercise quarterly; public status page; customer notification within 24h of confirmed breach
Bug bounty	HackerOne programme from M2 launch; $500–$10,000 bounty range

6. Team

6.1 Founding Team

The founding team combines deep technical capability (systems programming, distributed systems, financial software) with operational experience (running multi-entity businesses, managing compliance in regulated sectors, and scaling SaaS products). This combination is deliberate: UME's value proposition requires both the credibility to understand the organisational problems it solves, and the technical depth to build the right solution.

Chief Executive Officer *Key Expertise* Operational credibility; fundraising; enterprise relationships; regulatory navigation	15 years operating multi-entity businesses across the UK, EU, and Africa. Founded and scaled two software companies (one exit, one active). Deep experience with the exact fragmentation problem UME solves — managed a 12-entity group across 4 jurisdictions using 14 separate tools simultaneously.
Chief Technology Officer *Key Expertise* Rust platform architecture; kernel design; engineering team building; technical credibility with enterprise buyers	Systems programmer with 12 years of experience, 6 of them in Rust. Previously led the platform engineering team at a Series C fintech (400-person engineering org). Contributor to the Rust async ecosystem. Deep expertise in correctness-critical financial systems.
Chief Product Officer *Key Expertise* Product-market fit; domain knowledge across all 42 modules; design customer relationships; competitor intelligence	Product leader with 10 years spanning ERP (3 years at NetSuite), HRIS (2 years at Workday partner), and GRC (3 years at a scale-up). Interviewed 300+ organisations during UME's discovery phase. Designed the module interaction model and the jurisdiction policy pack schema.
VP Engineering (Backend) *Key Expertise* Kernel implementation; module SDK; performance engineering; Rust ecosystem relationships	Senior Rust engineer and architect. 8 years building high-throughput distributed systems. Previously at a payments infrastructure company (200M transactions/day). Designed UME's event bus, storage abstraction, and RBAC engine. Rust contributor (async-std ecosystem).
VP Engineering (Platform & Integrations) *Key Expertise* Java client architecture; REST API design; enterprise integration; SDK documentation	Full-stack engineer with particular depth in Java and Rust interop, API design, and enterprise integration patterns. Built the Java client suite. Designed the OpenAPI specification and the WebSocket event streaming protocol.

6.2 Hiring Plan

Role	Start Date	Function	Compensation Band
Senior Rust Engineer (×2)	Month 1 (Seed close)	Core kernel and module development	£90K–£120K + 0.25–0.5% equity
Senior Rust Engineer (×2)	Month 3	Module development (Finance, HR, Chombo)	£90K–£120K + 0.2–0.4% equity
Head of Regulatory Content	Month 6	Jurisdiction policy pack operation	£70K–£90K + 0.1–0.2% equity
Designer (UX/UI, ×1)	Month 3	Web portal, Java client, design system	£65K–£85K + 0.15–0.3% equity
QA / Test Engineer (×1)	Month 4	Integration test suite, CI pipeline, pentest coordination	£55K–£75K + 0.1–0.2% equity
Customer Success Manager (×1)	Month 6 (pre-launch)	Design customer onboarding, first 50 paid customers	£45K–£60K + 0.05–0.1% equity
VP Sales	Month 10 (pre-Series A)	Build and lead GTM motion; enterprise AE hiring	£100K–£130K + 0.3–0.5% equity
Sales AEs (×2)	Month 12 (post-Series A)	SMB and growth segment; inside sales	£50K–£70K base + commission + equity
Senior Rust Engineer (×4)	Month 12–18	Module depth; marketplace SDK; AI features	£90K–£120K + 0.1–0.2% equity
Marketing Lead	Month 12	Content, SEO, community, demand generation	£60K–£80K + 0.1–0.2% equity
Enterprise Sales AEs (×2)	Month 18	Enterprise segment (Series B)	£70K–£90K base + commission + equity
Head of Partnerships	Month 18	Accountant, solicitor, and tech partner channel	£80K–£100K + 0.1–0.2% equity

6.3 Advisors & Board

Advisor / Board Member	Background	Value-Add

Fractional CFO (advisor)	30 years in finance; former CFO of 3 UK PLCs; current NED at 2 growth companies	Financial model validation; investor introductions; enterprise CFO relationships
Regulatory Technology Expert (advisor)	Former Head of Regulatory Affairs at a major UK bank; 25 years in compliance technology	Jurisdiction pack quality assurance; regulated sector customer introductions; FCA/PRA navigation
Former ERP Founder (advisor)	Founded and sold a vertical ERP to a strategic acquirer at £40M exit; depth in the ERP displacement sales motion	Competitor intelligence; enterprise procurement process; channel partner strategy
Seed Investor / Board Observer	Partner at a London-based pre-seed / seed fund with a portfolio of 12 B2B SaaS companies	Follow-on capital access; portfolio introductions; SaaS benchmarking

7. Financial Projections

Projection Basis & Assumptions

All projections are in GBP (£). USD equivalents at £1 = $1.28.
Projections are built bottom-up from: (a) cohort-based customer acquisition by tier and channel; (b) headcount-based cost model; (c) infrastructure costs benchmarked against comparable SaaS deployments.
Three scenarios are modelled: Base (most likely), Bear (50% below plan), Bull (150% of plan).
Investors should treat all forward projections as illustrative; actual results will differ.

7.1 Revenue Projections

Revenue Stream	Year 1 (2026)	Year 2 (2027)	Year 3 (2028)	Year 4 (2029)	Year 5 (2030)
Starter Tier	£18K	£96K	£240K	£480K	£840K
Business Tier	£86K	£468K	£1,080K	£2,160K	£3,780K
Growth Tier	£192K	£960K	£2,400K	£4,800K	£8,400K
Enterprise Tier	£0	£600K	£2,400K	£6,000K	£12,000K
Professional Services	£60K	£300K	£600K	£900K	£1,200K
Marketplace / Partner Rev-Share	£0	£50K	£300K	£900K	£2,100K
AI Tier (post-M4)	£0	£0	£120K	£480K	£1,200K
Total Revenue	£356K	£2,474K	£7,140K	£15,720K	£29,520K
YoY Growth	—	595%	189%	120%	88%

7.2 Customer Count Projections (Base Case)

Tier	End Y1	End Y2	End Y3	End Y4	End Y5
Starter	60	320	800	1,600	2,800
Business	36	195	450	900	1,575
Growth	24	120	300	600	1,050
Enterprise	0	20	80	200	400
Total Paying Orgs	120	655	1,630	3,300	5,825
Blended MRR	£29.7K	£206K	£595K	£1,310K	£2,460K
ARR	£356K	£2,474K	£7,140K	£15,720K	£29,520K

7.3 Key SaaS Metrics (Base Case)

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
ARR	£356K	£2,474K	£7,140K	£15,720K	£29,520K
Net Revenue Retention (NRR)	102%	110%	115%	118%	120%

Gross Margin	60%	72%	78%	82%	85%
Customer Churn (annual)	10%	8%	6%	5%	5%
CAC (blended)	£3,200	£2,800	£2,400	£2,200	£2,000
CAC Payback (months)	13	9	7	6	5
Blended ACV	£2,967	£3,777	£4,380	£4,764	£5,068
Rule of 40 Score	—	—	52	61	71

7.4 Cost Structure & Headcount

Cost Category	Year 1	Year 2	Year 3	Year 4	Year 5
Headcount (FTE)	12	28	52	80	115
Staff Costs (£)	£1,020K	£2,520K	£4,680K	£7,200K	£10,350K
Infrastructure & Hosting	£71K	£247K	£571K	£1,101K	£1,771K
Sales & Marketing	£120K	£742K	£1,428K	£2,358K	£3,542K
G&A (legal, finance, office, insurance)	£180K	£320K	£520K	£720K	£960K
R&D (external contractors, tooling)	£80K	£160K	£280K	£400K	£520K
Total Operating Costs	£1,471K	£3,989K	£7,479K	£11,779K	£17,143K

7.5 EBITDA & Burn

P&L Line	Year 1	Year 2	Year 3	Year 4	Year 5
Total Revenue	£356K	£2,474K	£7,140K	£15,720K	£29,520K
Cost of Revenue	£143K	£693K	£1,571K	£2,830K	£4,428K
Gross Profit	£213K	£1,781K	£5,569K	£12,890K	£25,092K
Gross Margin	60%	72%	78%	82%	85%
Operating Expenses	£1,328K	£3,296K	£5,908K	£8,949K	£12,715K
EBITDA	(£1,115K)	(£1,515K)	(£339K)	£3,941K	£12,377K
EBITDA Margin	(313%)	(61%)	(5%)	25%	42%
Cumulative Cash Burn (from Seed)	(£1,115K)	(£2,630K)	(£2,969K)	—	—

7.6 Funding Requirements & Use of Funds

Round	Amount	Timing	Primary Use of Funds
Seed	$2.5M (£1.95M)	Q2 2026	12-person core team for 18 months; 20 jurisdiction policy packs; design customer programme; infrastructure setup; legal and IP protection
Series A	$12M (£9.4M)	Q4 2026	Sales & marketing build-out (VP Sales + 2 AEs + Marketing Lead); 45+ jurisdiction packs; enterprise feature set (SSO, Kubernetes, RBAC depth); Java client GA; customer success team

Series B	$40M (£31.3M)	Q3 2027	International expansion (US, EU, APAC go-to-market); marketplace ecosystem build; AI feature investment (M4); enterprise sales motion; 80 FTE by end of Series B runway

Use of Seed Funds ($2.5M)	Allocation	Amount
Engineering (salaries, contractors — 18 months)	52%	$1.30M
Jurisdiction policy pack build (20 jurisdictions)	14%	$0.35M
Infrastructure and tooling	8%	$0.20M
Sales & marketing (design customer programme, events)	10%	$0.25M
Legal, IP, and company setup	8%	$0.20M
Working capital buffer (6-month runway extension)	8%	$0.20M

7.7 Three-Scenario Summary (Year 3)

Metric	Bear Case	Base Case	Bull Case
Assumption	50% of plan customer acquisition; higher churn (10%)	Plan acquisition; 6% churn	150% of plan; lower churn (4%)
Paying Organisations (Y3)	815	1,630	2,445
ARR (Y3)	£3,570K	£7,140K	£10,710K
Gross Margin (Y3)	74%	78%	80%
EBITDA (Y3)	(£2,100K)	(£339K)	£2,280K
Series B Raise Needed?	Yes — extended Series A or bridge	No — breakeven near; Series B optional	No — EBITDA positive; Series B opportunistic

8. Risk Analysis & Mitigation

8.1 Risk Register

Risk	Category	Likelihood	Impact	Mitigation
Existing tools entrench and organisations resist consolidation	Market	Medium	High	Product-led growth bypasses organisational inertia; free embedded tier creates bottom-up adoption; accountant channel provides trusted recommendation
Rust talent is scarce and expensive; recruitment takes longer than planned	Operational	High	High	Remote-first hiring globally; competitive equity packages; Rust community partnerships; CTO is a known Rust contributor (credibility in community)
Jurisdiction policy pack accuracy failure causes a customer compliance miss	Product / Legal	Low	Critical	Per-pack legal review process; version control; customer liability limited by ToS; insurance; pack source attribution to counsel
A well-funded competitor launches a comparable product (e.g., Rippling expands to compliance)	Competitive	Medium	High	Moat is 45+ jurisdiction packs + kernel architecture + installed base; competitor replication requires 3–5 years; accelerate network effects
Enterprise sales cycle longer than forecast; ARR ramp delayed	Financial	Medium	Medium	Revenue mix weighted toward PLG and mid-market; enterprise is upside, not plan dependency; milestone 1 revenue is self-funded from SME tiers
Open source fork of the kernel creates free competitor	Technical / IP	Low	Medium	Core is proprietary; SDK is Apache 2.0 (SDK only, not kernel); jurisdiction packs are proprietary data; brand and install base are durable advantages
Regulatory change in key jurisdiction invalidates a policy pack (e.g., Companies Act amendment)	Operational	High	Medium	Pack versioning; regulatory monitoring service; 30-day update SLA; customer notification system built into Chombo
Data breach exposes customer financial or HR data	Security	Low	Critical	AES-256 encryption at rest; TLS 1.3 in transit; annual pentest; SOC 2 Type II programme from M2; bug bounty programme; cyber insurance
Key founder departure destabilises team or investor confidence	Execution	Low	High	4-year vesting with 1-year cliff for all founders; documented architecture and institutional knowledge; advisory board continuity
Banking / open banking API instability breaks Finance reconciliation	Technical	Medium	Low	Manual bank statement import is always available; open banking is an enhancement, not a dependency for core functionality

8.2 Regulatory & Legal Risks

Regulatory Area	Risk	Mitigation
GDPR / UK GDPR	Processing customer personal data (employee records, HR data) creates GDPR obligations for UME as a data processor	DPA published; SCCs for international transfers; DPA-compliant contract with all customers; RoPA maintained; DPO appointed at Series A
Financial services regulation	Finance module handles payment instructions and payroll; may be scrutinised under e-money or payment	Legal opinion obtained per jurisdiction; UME is an accounting tool, not a payment

	services regulation in some jurisdictions	service provider; no funds held; FCA/SEC guidance monitored
Professional liability	Compliance calendar derived from jurisdiction packs; if a pack is wrong and a customer misses a filing, UME may face liability claims	ToS limits liability; professional indemnity insurance; pack accuracy disclaimer; counsel sign-off on each pack
Employment law	HR module handles employment data, payroll calculations, and leave management; errors could expose customers to employment law claims	HR module is a tool, not an HR advisor; payroll calculations are customer-configured; ToS clarifies that UME does not provide legal or HR advice
AI regulation (future)	M4 AI features (deal scoring, anomaly detection) may be subject to emerging AI regulation (EU AI Act, UK AI framework)	AI features are advisory, not autonomous; confidence scores surfaced to user; human-in-the-loop design; regulatory monitoring from M3 development

9. The Investment Ask

Seed Round — $2.5M

We are raising $2.5M to build and launch UME Milestone 1, prove product-market fit with 100+ paying organisations, and achieve the metrics required to close a $12M Series A.

9.1 What We Are Building With This Capital

Objective	Measure	Timeline
Complete the UME platform core	All P0 features shipped; kernel + 8 core modules at GA quality	Month 12 (Q3 2026)
Launch 20 jurisdiction policy packs	UK, US (federal), EU Big 5, AU, CA, IE, SG, HK, and 9 others; legal reviewed	Month 10
Sign 20 design customers	Organisations with ≥2 entities, ≥2 jurisdictions, active use of 3+ modules	Month 8
Reach 100 paying organisations	$30K MRR; positive NPS from ≥40% of customers	Month 14
Achieve £35K MRR	Demonstrates customer willingness to pay and revenue growth trajectory	Month 18
Build a team of 12	5 additional engineers, 1 designer, 1 QA, 1 CS, 1 regulatory content lead, 1 sales hire	Month 10
Close Series A at $12M	ARR of £500K+; NRR 110%+; 200+ paying organisations; clear enterprise pipeline	Month 18 (Q4 2026)

9.2 Ideal Investor Profile

We are looking for investors who bring more than capital:

- Deep SaaS and B2B software investing experience — we want investors who understand ARR growth, GTM motion, and enterprise sales cycles
- Network in the SME / growth company ecosystem — customers, advisors, channel partners, and enterprise sponsors
- Experience with platform / ecosystem businesses — we are building a platform, not a point solution; investors who have backed marketplace and ecosystem plays are ideal
- Patience for a 3–5 year enterprise value build — our moat strengthens with time; we are not looking for investors who expect a 12-month flip
- Comfort with technical depth — UME's differentiation is architectural; investors who can appreciate the Rust / kernel design as a durable competitive advantage will be better partners

9.3 Proposed Terms & Structure

Term	Seed	Series A (Projected)
Raise amount	$2.5M	$12M

Instrument	SAFE with MFN and Pro-Rata	Priced equity round (Series A Preferred)
Valuation cap / pre-money	$10M cap	$45–55M pre-money (dependent on metrics)
Discount (SAFE)	20%	—
Lead investor	Seeking	Seeking; existing Seed investors have pro-rata rights
Board composition (post-Seed)	3 seats: 2 Founders + 1 Seed lead observer	5 seats: 2 Founders + 2 Series A investors + 1 Independent
Option pool	15% (post-money, Seed)	Refresh to 12% post-Series A
Founder vesting	4-year / 1-year cliff; 25% acceleration on change of control	Unchanged

9.4 Why Now

Three conditions are aligned that make 2026 the right time to build UME:

1. Rust has matured. Three years ago, building a production financial platform in Rust was heroic. Today, the ecosystem — Tokio, Axum, SQLx, serde — is production-grade and battle-tested. The team has the skills, the language has the libraries, and the hiring market for Rust is no longer impossibly tight.
2. Regulatory complexity is increasing, not decreasing. CSRD, DORA, SFDR, Making Tax Digital, and a dozen other new compliance frameworks are creating demand for exactly what Chombo provides. The regulatory tailwind that makes jurisdiction policy packs valuable will not reverse.
3. The SME market is ready. A generation of founders who built their companies on Notion and Figma have expectations for software quality that QuickBooks and BambooHR cannot meet. The moment is right for a new category: the Organisation Operating System.

Appendix A: 5-Year Financial Model (Detailed)

A.1 Monthly MRR Build (Year 1 — Base Case)

Month	New Orgs	Churn	Net Orgs	MRR (£)	ARR Run-Rate (£)
Month 1	5	0	5	£980	£11,760
Month 2	8	0	13	£2,548	£30,576
Month 3	10	1	22	£4,312	£51,744
Month 4	10	1	31	£6,076	£72,912
Month 5	12	2	41	£8,036	£96,432
Month 6	14	2	53	£10,388	£124,656
Month 7 (GA Launch)	20	3	70	£13,720	£164,640
Month 8	22	3	89	£17,444	£209,328
Month 9	20	4	105	£20,580	£246,960
Month 10	18	4	119	£23,324	£279,888
Month 11	16	5	130	£25,480	£305,760
Month 12	15	5	140	£27,440	£329,280

A.2 Headcount Plan by Function

Function	End Y1	End Y2	End Y3	End Y4	End Y5
Engineering (Rust/Backend)	7	14	22	30	40
Engineering (Platform/Integrations/QA)	2	5	8	12	16
Product & Design	1	3	5	7	10
Regulatory Content & Legal	1	4	7	10	13
Sales (AEs + SDRs)	0	4	8	14	20
Customer Success	1	3	6	10	15
Marketing	0	2	4	6	8
G&A (Finance, Legal, HR, Ops)	1	3	5	8	12
Founders (included in Engineering/Product)	5	5	5	5	5
Total FTE	12	28	52	80	115

A.3 Infrastructure Cost Model

Component	Y1 (120 orgs)	Y2 (655 orgs)	Y3 (1,630 orgs)	Y5 (5,825 orgs)

Compute (cloud VMs / Kubernetes nodes)	£24K	£84K	£192K	£600K
Database (managed PostgreSQL)	£12K	£54K	£126K	£360K
CDN / bandwidth	£6K	£24K	£60K	£180K
Monitoring (Datadog / equivalent)	£12K	£36K	£72K	£180K
Backup storage (S3 / equivalent)	£8K	£24K	£54K	£150K
Security tooling (Snyk, HackerOne, pentest)	£9K	£25K	£67K	£180K
Total Infrastructure	£71K	£247K	£571K	£1,650K

Appendix B: Product Architecture Summary

For technical investors and due diligence, the following summarises the key architectural decisions and their business rationale.

Architecture Decision	Technical Detail	Business Rationale
Rust as primary language	Rust 1.75+; Tokio async runtime; Axum HTTP; SQLx for database access; serde for serialisation	Type safety eliminates entire classes of financial and data bugs at compile time. No runtime exceptions. 10× lower infrastructure cost per unit of throughput vs. JVM/Node platforms at scale.
Single-process kernel	All 42 modules in one OS process per deployment node; in-process channels for event delivery; shared memory for hot cache	Sub-100ms P50 API response for cross-domain operations. No network hop between, e.g., HR and Finance. Horizontal scaling via multiple nodes behind load balancer.
Cryptographic audit chain	SHA-256 hash-chained audit records; each record includes hash of predecessor; offline verification tool included	Tamper evidence without blockchain infrastructure. Every record is verifiable against the chain. Regulatory-grade audit from day one. No additional audit database required.
Kernel facade pattern	Modules access all external resources (storage, comms, auth) via the kernel facade interface; never directly	Modules cannot accidentally bypass RBAC or audit. Replacing a storage backend (SQLite → PostgreSQL) is a kernel change; zero module code changes. All cross-domain communication is observable.
Jurisdiction policy packs as data	Compliance rules stored as versioned JSONB in the database; evaluated at runtime by the Chombo policy engine	Regulatory changes ship as data updates, not code releases. New jurisdiction = new pack file; no platform rebuild. Packs can be updated independently of the platform release cycle.
Embedded mode (SQLite)	Single binary with no external dependencies; SQLite for persistence; InMemory event bus; all features available	A 1-person business on a MacBook Pro has the identical feature set as a 500-person company on Kubernetes. Zero infrastructure cost for solo users. Network effect: same platform, every scale.

Appendix C: Jurisdiction Policy Pack Coverage

Region	Jurisdictions at M1 Launch	Additional Jurisdictions at M2	Planned M3 Expansion
United Kingdom	England & Wales, Scotland, Northern Ireland	—	—
United States	Federal (C-Corp, LLC, LLP, Non-Profit)	Delaware, California, New York, Texas	All 50 states (federal structures; state specifics for top 15 states by business formation)
European Union	Germany, France, Netherlands, Ireland, Luxembourg	Spain, Italy, Belgium, Austria, Sweden	Full EU27 coverage
Commonwealth	Australia, Canada (federal), New Zealand	Canada (provinces: ON, BC, AB)	South Africa, India (federal)
Asia Pacific	Singapore, Hong Kong	—	Japan, UAE (DIFC), Malaysia
Africa	Kenya, Nigeria (federal)	South Africa	Ghana, Rwanda, Tanzania
International Structures	Cayman Islands (fund structures), BVI, Jersey (trust/fund)	Isle of Man, Guernsey	Mauritius, ADGM (Abu Dhabi)

Appendix D: Design Customer Criteria & Programme Details

Element	Specification
Target organisation profile	Revenue: £500K–£20M; employees: 5–200; entities: 2+; jurisdictions: 2+; currently using ≥3 separate business tools; experienced at least 1 compliance issue in past 3 years
Recruitment channels	Founder networks (YC alumni, Indie Hackers, Techstars UK); accountant/solicitor referrals; direct outreach to startups with recent multi-entity formation activity
Programme commitments (UME)	Free access to Growth tier for 24 months from GA; weekly session with CPO or CTO; bug fixes within 48 hours; feature requests in the next sprint; co-authorship of public case study
Programme commitments (customer)	Weekly 60-minute session; access to usage logs (anonymised); reference customer at launch; investor reference (if asked); NPS feedback monthly
Cohort size	20 organisations; recruitment begins Month 4; all 20 signed by Month 8
Expected conversion to paid (Year 2)	18 of 20 converting to paid at discounted rate; 2 expected churn; total ARR contribution from design cohort: £144K by end of Year 2
